The number of persons enrolled in Medicare Advantage (MA) and prepaid plans in Massachusetts increased modestly between December 2005 and September 2007, from over 161,500 to over 173,000 persons (Table 1). The enrollment in MA plans represents about 17% of Massachusetts Medicare beneficiaries. However, enrollment in MA plans in Massachusetts trailed the national enrollment rate of 20%.

There were no enrollees in MA or prepaid plans in rural areas in Massachusetts in 2005 or 2007.

Note: PFFS = private fee-for-service.

Growth Most Significant in Private Fee-for-Service Plans

The increase in MA enrollment in Massachusetts has been led by exceptionally rapid growth in private fee-for-service (PFFS) plans. While in December of 2005 there were no enrollees in PFFS plans statewide, enrollment in PFFS plans jumped to over 20,000 in September of 2007 (Table 1). In contrast, the number of enrollees in health maintenance organization (HMO) and point of service plans decreased by 11.3% in the same period.

Medicare Advantage Plans Described

MA plans are private-sector plans that contract with Medicare to provide all Medicare-related services, plus additional benefits (e.g., prescription drugs, vision care, preventive care), sometimes at an additional cost to beneficiaries. Prepaid plans are special plans created over the years by legislation and comprise mostly “cost” plans. PFFS plans, created by legislation in 1997, are private MA plans that contract with Medicare like other MA plans, but for the most part do not operate networks of providers, such as HMOs operate. Instead, PFFS plans pay providers on a fee-for-service basis after receiving payment from Medicare.

Conclusion and Implications

MA plans have spread to more areas and enrolled a higher number of beneficiaries due to a number of factors, including significant growth in payment to MA plans. PFFS plans have gained a strong foothold in rural areas because the differential between the MA Medicare payment and traditional Medicare payment is large, and because it is less difficult to set up a PFFS plan than other types of MA plans (e.g., HMOs). Thus, there are strong incentives for PFFS plans to seek rural enrollment. While it is too early to gauge the full impact of MA plans, these plans give more options to Medicare recipients and lower out-of-pocket costs. On the other hand, providers have had to make significant adjustments in timing and collection practices to deal with these new Medicare program payers. The U.S. Congress is now wrestling with how to pay for the rapid growth in MA plans, especially PFFS plans.

Contact and Further Information
